The following is a list of items that the inspector will be looking for. This is meant as a guide to assist you in obtaining approval for your work and may not include everything the inspector is looking for.

1. All sprinkler systems must be certified by a certified backflow inspector. The certified backflow test must be placed in the permit bag or in the backflow box at time of final inspection.

Backflow preventor may be:

A) An accepted double check valve assembly installed in a box below ground with a one foot (1') deep gravel bed below. Double check valves installed underground must have all test - cock orifices plugged with threaded plugs.

B) A vacuum breaker in the supply line electrically controlled by the control panel so that it turns on and off with each system.**

C) A vacuum breaker at the beginning of each system electronically controlled by the control system.**

**Each vacuum breaker must be at least six inches (6") higher than the highest head served. Gravel must be installed at the bottom of the backflow box.

2. Work within eight feet (8') of the backflow valve or at connection to main water source must be uncovered at time of final inspection.
